Hagaon R Elya Ber Wachtfogel, Rosh Yeshiva of Yeshiva of South Fallsburg

"(*B'shum ofen*) under no circumstances should a boy or girl take the vaccine. It is suicide.

If they want to fulfill the mitzvah of *Peru Urevu* they should not think of taking this vaccine.

It could have fertility effects; neither a boy nor a girl should take the vaccine. The fertility concern is a possibility; there is no proof."

"It's not a reason to endanger oneself; to go back [to eretz yisrael] yeshiva or seminary."

"This is an experimental vaccine, turns over the DNA; the yesod. It could possibly add on life but… great damages.

"Be *Mefarsem* as much as possible; even for older people if they will listen to you continue telling people about dangers.

"Keep publicizing as much as possible. "You could be saving hundreds of lives."
